

ANSHUMAN PANDEY

Full-Stack Developer & Product Builder

+91 8604683669 | tonybanner885@gmail.com | sakshamfit.netlify.app | github.com/sakshamfit | Product: plusoneco.in

SUMMARY

Full-Stack Developer and product builder experienced in building and shipping web applications, API-driven products, and AI-powered software. Strong hands-on experience across TypeScript/JavaScript, React.js, Node.js, Express.js, MongoDB, REST APIs, and LLM/API integrations. Founder and developer of +one, with previous experience building NEARconnect, taking products from idea and architecture through development, debugging, and iteration. Experienced in working across frontend and backend, integrating external APIs and AI models, evaluating model capabilities, and translating ambiguous product requirements into practical engineering solutions. Strong interest in AI evaluation, LLM applications, applied AI, customer engineering, and developer tooling, with a customer-first approach and a bias toward shipping useful solutions quickly.

EXPERIENCE

Founder & Full-Stack Developer

+ONE — *plusoneco.in*

- Founded and developed +one, owning the product journey from initial concept and architecture through implementation and continuous iteration.
- Built across the frontend, backend, APIs, database, product workflows, and UI/UX, demonstrating end-to-end product ownership.
- Developed modern web interfaces using TypeScript/JavaScript and React-based technologies with a focus on responsive and intuitive user experiences.
- Built backend services and API-driven workflows using Node.js and Express.js.
- Designed application data structures and database workflows using MongoDB.
- Integrated and experimented with LLM APIs and emerging AI models to explore practical AI-powered product capabilities.
- Evaluated different AI models for specific workflows, considering response quality, usefulness, latency, and practical product fit.
- Translated product ideas and user requirements into concrete technical solutions and shipped iterative improvements.
- Debugged problems across frontend, backend, APIs, and database layers.
- Managed product decisions, technical implementation, testing, deployment, and ongoing improvements independently.

Founder & Full-Stack Developer

NEARconnect

- Conceptualized and developed NEARconnect, a platform designed to connect people with relevant professionals and businesses based on profession and location.
- Designed the product architecture, user flows, frontend, backend APIs, and database structure.
- Developed responsive interfaces using React.js, JavaScript, HTML5, CSS3, and Tailwind CSS.
- Built backend services using Node.js and Express.js with MongoDB for persistent application data.
- Designed API workflows supporting user profiles, professional discovery, and location-based interactions.
- Worked across the complete stack to implement features, troubleshoot issues, and improve the product.
- Converted real-world networking and discovery problems into practical product and engineering solutions.
- Independently managed product ideation, technical decisions, development, debugging, and iteration.

PROJECTS

+one | AI / Full-Stack Product

- End-to-end product development with ownership across architecture, frontend, backend, APIs, UI/UX, and AI experimentation.
- Built and iterated on product workflows while exploring practical applications of emerging AI technologies.

NEARconnect | React.js | Node.js | Express.js | MongoDB

- Full-stack platform connecting users with professionals based on profession and location.
- Designed the application architecture, frontend, backend APIs, database workflows, and product experience.

AI Assistant | Python | LLM APIs | Generative AI

- Developed an AI assistant concept connecting application functionality with an LLM through API-based workflows.
- Explored conversational AI, automation, voice interaction, and practical LLM integration.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, HTML5, CSS3

Frontend: React.js, Tailwind CSS, Responsive Web Development, UI/UX Implementation

Backend: Node.js, Express.js, REST APIs, API Integration, Authentication

Database: MongoDB, Data Modeling, CRUD Operations

AI / LLM: LLM APIs, OpenAI API, Generative AI, Prompt Engineering, AI Assistants, Model Experimentation, Model Comparison & Evaluation

Engineering: Full-Stack Development, API Architecture, Debugging, Performance Optimization, Automation, Third-Party Integrations, System Design Fundamentals

Tools: Git, GitHub, npm, VS Code, API Testing

Product / Customer: Requirement Gathering, Product Development, Technical Problem Solving, Stakeholder Communication, Process Improvement

AI / LLM ENGINEERING

- Hands-on experimentation with large language models and AI APIs for real-world software and product use cases.
- Worked with OpenAI and other emerging AI models/platforms, exploring differences in capabilities and output quality.
- Built an AI assistant concept using LLM API integration and application-level conversational workflows.
- Experimented with prompt engineering, model behavior, API integration, AI automation, and conversational interfaces.
- Compared AI models based on task performance, response quality, latency, and suitability for different workflows.
- Explored practical approaches to embedding AI capabilities directly into customer-facing software products.
- Continuously evaluated emerging AI tools and models to identify useful capabilities for product development.

EDUCATION

Bachelor of Computer Application (BCA)

DDU University — Currently pursuing, 3rd Semester
